

# A Reconstruction of the Earliest Sayings Gospel

Working edition, July 19, 2026

## Clean Reconstructed Text

2 Jesus said: Let the one who seeks not stop seeking until they find.

3 Jesus said: Do not seek the kingdom as a place in heaven or in the sea: the kingdom is within you and outside you. When you know yourselves, you will be known, and you will know that you are children of the living Father. If you do not know yourselves, you are in poverty, and you are poverty.

4 Jesus said: Many who are first will become last, and the last first. An old person will not hesitate to ask a seven-day-old child about the place of life, and that person will live; they will become one.

5 Jesus said: Nothing is hidden that will not become manifest. Know what is before your face, and what is hidden from you will be revealed to you.

6 Jesus said: Do not lie, and do not do what you hate.

9 Jesus said: A sower went out to sow. Some seed fell on the road, some on rock, some among thorns, and some on good soil; only the good soil bore fruit.

10 Jesus said: I cast fire upon the world.

16 Jesus said: I came not to bring peace, but division; a house will be divided.

20 Jesus said: The kingdom is like a mustard seed: it is small, but it grows and gives shelter to the birds of heaven.

22 Jesus said: Little children are like those who enter the kingdom.

25 Jesus said: Love your brother as your own soul; guard him as the apple of your eye.

26 Jesus said: You see the speck in your brother's eye, but you do not see the beam in your own eye. When you remove the beam from your own eye, then you will see clearly how to remove the speck from your brother's eye.

31 Jesus said: A prophet is not accepted in his own place. And a physician does not heal those who know him.

32 Jesus said: A city built and fortified on a high mountain cannot fall and cannot be hidden.

33 Jesus said: What you hear in your ear, proclaim from the rooftops. No one lights a lamp to put it under a measure or in a hidden place; it is put on a lampstand so that all may see the light.

34 Jesus said: If a blind person leads a blind person, both will fall into a pit.

35 Jesus said: No one can enter a strong man's house and take his possessions unless he first binds his hands; then he will plunder his house.

36 Jesus said: Do not be anxious from morning until evening and from evening until morning about what you will wear.

39 Jesus said: The scribes and Pharisees have taken the keys of knowledge: they did not enter, and they did not allow those who wished to enter. Be wise as serpents and pure as doves.

41 Jesus said: Whoever has will be given more; whoever does not have will lose even the little that they have.

45 Jesus said: Grapes are not gathered from thorns, nor figs from thistles.

46 Jesus said: Among those born of women none is greater than John; yet the least in the kingdom is greater than he.

47 Jesus said: A servant cannot serve two masters: he will honor one and despise the other.

54 Jesus said: Blessed are the poor, for the kingdom of heaven belongs to you.

63 Jesus said: A rich man had many possessions. He planned to sow, reap, plant, and fill his storehouses so that he would lack nothing. That night he died.

72 A man said to him, "Tell my brothers to divide my father's property with me." He said to him, "Man, who made me a divider?" And turning to his disciples, he said, "Am I a divider?"

73 Jesus said: The harvest is great, but the workers are few. Ask the Lord to send workers into the harvest.

86 Jesus said: Foxes have holes, birds have nests, but the Son of Man has nowhere to lay his head.

89 Jesus said: Why do you clean the outside of the cup? Do you not understand that the one who made the inside also made the outside?

91 Jesus said: You know how to read the face of heaven and earth, but you do not recognize this time.

95 Jesus said: If you have money, do not lend at interest; give to the one from whom you do not expect to receive it back.

96 Jesus said: The kingdom is like a woman who took a little leaven and hid it in dough.

99 Jesus said: Those who do the Father's will are my brothers and my mother.

100 Jesus said: Give Caesar what belongs to Caesar, and God what belongs to God.

103 Jesus said: Blessed is the one who knows when the thief is coming and keeps watch before he comes.

107 Jesus said: A shepherd had one hundred sheep. One of them went astray; he left the ninety-nine and searched for it until he found it.

## How To Read This Edition

The first reader-facing layer is the clean reconstructed text only. The logion numbers follow the conventional Gospel of Thomas numbering. The commentary appendix covers all 114 logia so readers can compare included, uncertain, deferred, appendix only, and excluded material without relying on clickable links.

## Full 114-Logion Commentary Appendix

## Full 114-Logion Commentary Appendix

## How To Use This Appendix

The clean reconstructed text is the first layer of the book. This appendix is the second layer. It explains why each conventional Gospel of Thomas logion is included, cautious, deferred, kept appendix only, or excluded from the earliest reconstructed sayings-gospel.

The appendix covers all 114 logia, including rejected and uncertain material. Non-inclusion is not concealment: it is part of the argument. The reader should be able to find any logion by its conventional number and see the present state of the evidence.

Greek status means the status of loaded Greek Thomas papyrus evidence for this edition. A hypothetical Greek retroversion is never treated as an extant manuscript witness.

## Logion 1

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 654.

### What This Saying Is About

This opening saying functions like a doorway into the whole collection. It tells the reader that the sayings are not merely to be stored in memory; they have to be interpreted. The promise of not tasting death is therefore best read as a claim about life opened by understanding, not as a simple promise of biological escape.

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; collection-frame/deathlessness controlled through local research apparatus.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Later collection-frame/prologue material, not an independent earliest saying for the strict-40 clean reconstruction. Preserve full Coptic/Greek witness and explain why it was moved out of the clean text.

### Possible Interpretations

1. Early-core reading: the interpretation promise / collection frame may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 2

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 654.

### What This Saying Is About

This saying preserves a strong search/find core. The longer transmitted form describes finding as a process that unsettles the seeker: finding leads to disturbance, amazement, reigning, and possibly rest. That longer chain matters for the history of Thomas 2, but it should not be treated as equally early with the short core.

### Text In This Edition

Only the search/find core is printed in the clean English reconstruction:

Jesus said: Let the one who seeks not stop seeking until they find.

The continuation about disturbance, amazement, reigning, and rest/reigning-over-the-All remains in the appendix. The Greek and Coptic endings diverge, so the clean reconstruction does not choose between them.

### Sources And Controls

Primary source/control summary: direct evidence; Matthew/Luke control; seek/find cluster note.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition prints the short search/find core because it has enough early-profile value to represent the motif in the reconstructed sayings gospel. The fuller received Thomasine form remains in the appendix because the expansion is textually and theologically complicated. The seek/find cluster pass keeps Logion 2 as the main reader representative of this motif while Logia 92 and 94 remain appendix only.

### Possible Interpretations

1. Early-core reading: the search/find core may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant Oxyrhynchus evidence gives this logion an additional material control, but the disputed ending still requires caution.

### **Uncertainty And Limits**

## Logion 3

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 654.

### What This Saying Is About

This logion rejects the idea that the kingdom is a faraway location. It turns the question inward and outward at once: the decisive recognition concerns the self, the world, and one's relation to the living Father.

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Do not seek the kingdom as a place in heaven or in the sea: the kingdom is within you and outside you.

When you know yourselves, you will be known, and you will know that you are children of the living Father. If you do not know yourselves, you are in poverty, and you are poverty.

The printed unit is the this edition's current reconstruction of the kingdom within/outside + self-knowledge unit. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: kingdom within/outside + self-knowledge unit; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the kingdom within/outside + self-knowledge unit may preserve a compact saying or motif that circulated before later literary framing.

2. Theological reading: the saying may be less about institution or doctrine than about a transformed way of recognizing God, life, and the self.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 4

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 654.

### What This Saying Is About

This section concerns the first-last core with child/life frame. It belongs to the child/kingdom field: smallness, origin, and receptivity become ways of speaking about entry into life. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Many who are first will become last, and the last first.

An old person will not hesitate to ask a seven-day-old child about the place of life, and that person will live; they will become one.

The printed unit is the this edition's current reconstruction of the first-last core with child/life frame. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: first-last core with child/life frame; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the first-last core with child/life frame may preserve a compact saying or motif that circulated before later literary framing.

2. Theological reading: the saying may be less about institution or doctrine than about a transformed way of recognizing God, life, and the self.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 5

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 654.

### What This Saying Is About

This section concerns the hidden/revealed maxim with recognition frame. It belongs to the hidden/revealed field: the saying asks how truth moves from concealment into visibility. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Nothing is hidden that will not become manifest.

Know what is before your face, and what is hidden from you will be revealed to you.

The printed unit is the this edition's current reconstruction of the hidden/revealed maxim with recognition frame. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: hidden/revealed maxim with recognition frame; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the hidden/revealed maxim with recognition frame may preserve a compact saying or motif that circulated before later literary framing.

2. Revelatory reading: the saying treats hiddenness as temporary and asks what sort of perception makes disclosure possible.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 6

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 654, lacunose.

### What This Saying Is About

The main text preserves only the short ethical core: do not lie, and do not do what you hate. The surrounding ritual and question-answer frame is left in the appendix because it is more compositionally complex.

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Do not lie, and do not do what you hate.

The printed unit is the this edition's current reconstruction of the ethical core only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek evidence gives valuable material control, but it is fragmentary or lacunose and must not be treated as a complete independent form. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: ethical core only; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the ethical core only may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 7

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 654.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; explicit no-direct-control rationale in card/classification.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 8

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 9

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the non-allegorical sower core. It belongs to the parable field: ordinary rural or household images are used to make a claim about recognition, growth, judgment, or loss. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: A sower went out to sow. Some seed fell on the road, some on rock, some among thorns, and some on good soil; only the good soil bore fruit.

The printed unit is the this edition's current reconstruction of the non-allegorical sower core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: non-allegorical sower core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the non-allegorical sower core may preserve a compact saying or motif that circulated before later literary framing.
2. Parabolic reading: the saying uses an ordinary image to make the reader reason from visible life toward hidden meaning.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 10

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the fire-casting core. It belongs to the fire/kingdom field: fire can signal crisis, judgment, purification, or the disruptive arrival of the message. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: I cast fire upon the world.

The printed unit is the this edition's current reconstruction of the fire-casting core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; Luke fire control; fire/kingdom cluster note.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: fire-casting core; fire/kingdom cluster-control keeps the watching/blazing continuation in apparatus. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the fire-casting core may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 11

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; heaven-passing control; living/dead/world cluster note.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists; living/dead/world cluster pass keeps full logion outside main text because only the heaven-passing subunit is externally strong. The appendix therefore explains why the tradition matters while the full logion remains outside the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 12

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 13

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 14

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists; full form is composite ritual/mission/defilement material and must be split before any reader decision. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 15

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 16

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the division/household core. It belongs to the family and discipleship field: kinship language is used to redefine loyalty, identity, and belonging. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: I came not to bring peace, but division; a house will be divided.

The printed unit is the this edition's current reconstruction of the division/household core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; division controls; family-renunciation cluster note.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: division/household core; family-renunciation cluster-control keeps the full form in apparatus because fire/sword/war and monachos remain risky. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the division/household core may preserve a compact saying or motif that circulated before later literary framing.

2. Discipleship reading: the saying may redefine kinship around obedience, insight, or loyalty rather than blood relation.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

## **Uncertainty And Limits**

## Logion 17

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale v0.1 now exists; scriptural/christian formula remains unresolved without extant Greek Thomas witness. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 18

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus living/dead/world cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale and cluster-control v0.1 now exist; deathlessness phrase is embedded in a Thomas beginning/end frame. The appendix therefore preserves the partial deathlessness control without promoting the whole logion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 19

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 20

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the mustard-seed parable core. It belongs to the parable field: ordinary rural or household images are used to make a claim about recognition, growth, judgment, or loss. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: The kingdom is like a mustard seed: it is small, but it grows and gives shelter to the birds of heaven.

The printed unit is the this edition's current reconstruction of the mustard-seed parable core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: mustard-seed parable core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the mustard-seed parable core may preserve a compact saying or motif that circulated before later literary framing.
2. Parabolic reading: the saying uses an ordinary image to make the reader reason from visible life toward hidden meaning.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 21

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This is a composite watchfulness and harvest text. Its thief motif is important for understanding Logion 103, but the full logion gathers several images into one larger Thomasine composition.

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale; thief/watchfulness cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Thief/watchfulness cluster-control keeps full 21 appendix only; its thief subunit supports 103A but is too embedded in a composite field/world/harvest unit to print separately. The appendix therefore distinguishes the subunits and explains why the full form is not printed.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.

5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 22

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the children/kingdom core. It belongs to the kingdom-sayings field: the question is how God's reign is recognized, entered, embodied, or misunderstood. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Little children are like those who enter the kingdom.

The printed unit is the this edition's current reconstruction of the children/kingdom core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: children/kingdom core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the children/kingdom core may preserve a compact saying or motif that circulated before later literary framing.
2. Theological reading: the saying may be less about institution or doctrine than about a transformed way of recognizing God, life, and the self.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 23

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists, but the unit is best handled through its source/thematic cluster before any reader decision. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 24

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 655 possible/uncertain.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists, but the unit is best handled through its source/thematic cluster before any reader decision. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 25

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the love-brother core. It belongs to the family and discipleship field: kinship language is used to redefine loyalty, identity, and belonging. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Love your brother as your own soul; guard him as the apple of your eye.

The printed unit is the this edition's current reconstruction of the love-brother core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: love-brother core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the love-brother core may preserve a compact saying or motif that circulated before later literary framing.
2. Discipleship reading: the saying may redefine kinship around obedience, insight, or loyalty rather than blood relation.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 26

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 1 partial.

### What This Saying Is About

This section concerns the speck/beam core. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: You see the speck in your brother's eye, but you do not see the beam in your own eye. When you remove the beam from your own eye, then you will see clearly how to remove the speck from your brother's eye.

The printed unit is the this edition's current reconstruction of the speck/beam core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek evidence gives valuable material control, but it is fragmentary or lacunose and must not be treated as a complete independent form. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: speck/beam core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the speck/beam core may preserve a compact saying or motif that circulated before later literary framing.

2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 27

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 1; P.Oxy. 5575 control.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 28

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 1 partial.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The Greek evidence gives valuable material control, but it is fragmentary or lacunose and must not be treated as a complete independent form. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale v0.1 now exists, but the unit remains unresolved; keep in appendix until a separate split-core or source-control pass. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 29

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 1 tiny fragment.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The Greek evidence gives valuable material control, but it is fragmentary or lacunose and must not be treated as a complete independent form. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists, but the unit is best handled through its source/thematic cluster before any reader decision. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 30

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 1, textually complex with 77b.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists, but the unit is best handled through its source/thematic cluster before any reader decision. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 31

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 1.

### What This Saying Is About

This section concerns the prophet homeland + physician clause. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: A prophet is not accepted in his own place.

And a physician does not heal those who know him.

The printed unit is the this edition's current reconstruction of the prophet homeland + physician clause. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: prophet homeland + physician clause; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the prophet homeland + physician clause may preserve a compact saying or motif that circulated before later literary framing.

2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 32

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 1.

### What This Saying Is About

This section concerns the city on high mountain. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: A city built and fortified on a high mountain cannot fall and cannot be hidden.

The printed unit is the this edition's current reconstruction of the city on high mountain. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: city on high mountain; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the city on high mountain may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 33

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 1 opening only.

### What This Saying Is About

This section concerns the ear/rooftops + lamp/lampstand unit. It belongs to the hidden/revealed field: the saying asks how truth moves from concealment into visibility. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: What you hear in your ear, proclaim from the rooftops.

No one lights a lamp to put it under a measure or in a hidden place; it is put on a lampstand so that all may see the light.

The printed unit is the this edition's current reconstruction of the ear/rooftops + lamp/lampstand unit. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: ear/rooftops + lamp/lampstand unit; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the ear/rooftops + lamp/lampstand unit may preserve a compact saying or motif that circulated before later literary framing.

2. Revelatory reading: the saying treats hiddenness as temporary and asks what sort of perception makes disclosure possible.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 34

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the blind leading blind. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: If a blind person leads a blind person, both will fall into a pit.

The printed unit is the this edition's current reconstruction of the blind leading blind. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: blind leading blind; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the blind leading blind may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 35

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the strong man house. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: No one can enter a strong man's house and take his possessions unless he first binds his hands; then he will plunder his house.

The printed unit is the this edition's current reconstruction of the strong man house. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: strong man house; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the strong man house may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 36

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 655; P.Oxy. 5575 control.

### What This Saying Is About

This section concerns the anxiety about clothing core. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Do not be anxious from morning until evening and from evening until morning about what you will wear.

The printed unit is the this edition's current reconstruction of the anxiety about clothing core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: anxiety about clothing core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the anxiety about clothing core may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 37

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 655.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale v0.1 now exists, but the unit remains unresolved; keep in appendix until a separate split-core or source-control pass. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 38

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 655 fragmentary.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The Greek evidence gives valuable material control, but it is fragmentary or lacunose and must not be treated as a complete independent form. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale v0.1 now exists, but the unit remains unresolved; keep in appendix until a separate split-core or source-control pass. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 39

### Reconstruction Status

- Main text: yes.
- Greek witness status: P.Oxy. 655.

### What This Saying Is About

This section concerns the keys of knowledge + serpents/doves composite. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: The scribes and Pharisees have taken the keys of knowledge: they did not enter, and they did not allow those who wished to enter.

Be wise as serpents and pure as doves.

The printed unit is the this edition's current reconstruction of the keys of knowledge + serpents/doves composite. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: keys of knowledge + serpents/doves composite; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the keys of knowledge + serpents/doves composite may preserve a compact saying or motif that circulated before later literary framing.

2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 40

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale v0.1 now exists; Matthew 15:13 control is strong but direction of dependence remains unresolved. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 41

### Reconstruction Status

- Main text: yes.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the has/given formula. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Whoever has will be given more; whoever does not have will lose even the little that they have.

The printed unit is the this edition's current reconstruction of the has/given formula. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: has/given formula; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the has/given formula may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 42

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale v0.1 now exists; brief passersby saying lacks secure external control. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 43

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; control package: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 44

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 45

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

The reconstructed reader uses the fruit-tree core. The heart-treasure material is important, but this edition keeps it in the appendix because the full logion combines related but separable moral images.

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Grapes are not gathered from thorns, nor figs from thistles.

The printed unit is the this edition's current reconstruction of the 45A grapes/thorns only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: 45A grapes/thorns only; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the 45A grapes/thorns only may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

## **Uncertainty And Limits**

## Logion 46

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical; no loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the 46A short John/least-in-kingdom core; full logion appendix only. It belongs to the kingdom-sayings field: the question is how God's reign is recognized, entered, embodied, or misunderstood. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Among those born of women none is greater than John; yet the least in the kingdom is greater than he.

The printed unit is the this edition's current reconstruction of the 46A short John/least-in-kingdom core; full logion appendix only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present; Review C v0.1; controlled reader pass 46A/91A v0.1.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Controlled reader pass 46A/91A includes only the short John/least-in-kingdom core; the full Thomas wording remains appendix only. The appendix therefore explains why the short core is strong while the full received form remains outside the main text.

### Possible Interpretations

1. Early-core reading: the 46A short John/least-in-kingdom core; full logion appendix only may preserve a compact saying or motif that circulated before later literary framing.

2. Theological reading: the saying may be less about institution or doctrine than about a transformed way of recognizing God, life, and the self.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

## **Uncertainty And Limits**

## Logion 47

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the 47B two masters only. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: A servant cannot serve two masters: he will honor one and despise the other.

The printed unit is the this edition's current reconstruction of the 47B two masters only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: 47B two masters only; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the 47B two masters only may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 48

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists; two-in-peace and mountain-moving material belongs in the unity/mountain cluster. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 49

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists; solitary/elect language belongs in the unity/monachos cluster. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 50

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists; light/election/image identity dialogue requires cluster treatment. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 51

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists; realized eschatology requires Thomas 3/113 and Luke 17:20-21 cluster treatment. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 52

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus living/dead/world cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale and cluster-control v0.1 now exist; living/dead and prophetic-witness material remains cluster-bound. Keep appendix only as Living One / dead-prophets interpretive material.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 53

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 54

### Reconstruction Status

- Main text: yes.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the blessed poor. It belongs to the wealth and renunciation field: the saying tests the relation between possessions, desire, loss, and freedom. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Blessed are the poor, for the kingdom of heaven belongs to you.

The printed unit is the this edition's current reconstruction of the blessed poor. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; blessed-poor control; beatitudes cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: beatitudes cluster pass confirms Logion 54 as the strongest poor/kingdom beatitude while preserving apparatus caution. The appendix therefore explains why this beatitude is printed while related beatitudes remain appendix only.

### Possible Interpretations

1. Early-core reading: the blessed poor may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 55

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; discipleship-cross control; family-renunciation cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Family-renunciation tradition is important, but the extant form joins hate-family, carrying the cross, and worthiness language in a way that remains too risky for clean reconstruction. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 56

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus living/dead/world cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale and cluster-control v0.1 now exist; world/corpse language is internally important but externally weak. Keep full discussion in appendix with Logia 80 and 111.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 57

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 58

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus beatitudes cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale and cluster-control v0.1 now exist; short wisdom beatitude remains uncertain without strong direct control. Keep appendix only as plausible wisdom/labor/life material.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.

5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 59

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus living/dead/world cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale and cluster-control v0.1 now exist; Living One/death language remains appendix only. Keep full discussion in appendix as realized-recognition material.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 60

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus living/dead/world cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale and cluster-control v0.1 now exist; symbolic lamb/corpse/rest scene requires cluster interpretation. Keep full discussion in appendix; do not promote a scene-like unit into main text.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 61

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus;  
cluster-control: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 62

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists; Matthew 6:3 control is embedded in a mysteries frame. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 63

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This is the rich-fool warning: a person plans future abundance, but death arrives before the plan can be enjoyed. The saying is powerful, but its closeness to Luke means the apparatus has to keep dependence risk visible.

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: A rich man had many possessions. He planned to sow, reap, plant, and fill his storehouses so that he would lack nothing. That night he died.

The printed unit is the this edition's current reconstruction of the rich-fool core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: rich-fool core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the rich-fool core may preserve a compact saying or motif that circulated before later literary framing.
2. Renunciation reading: the saying may expose how possession promises security while actually binding the person to anxiety, status, or loss.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 64

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 65

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 66

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 67

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale v0.1 now exists; self-knowledge aphorism has mainly internal support. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 68

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus beatitudes cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale and cluster-control v0.1 now exist; persecution beatitude has controls but difficult Thomas ending. Keep appendix only despite strong motif controls.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.

5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 69

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus beatitudes cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale and cluster-control v0.1 now exist; beatitude material is strong but the Thomas form remains composite and difficult. Keep appendix only pending any future split-core review.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 71

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 72

### Reconstruction Status

- Main text: yes.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the inheritance-dispute refusal. It belongs to the wealth and renunciation field: the saying tests the relation between possessions, desire, loss, and freedom. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

A man said to him, "Tell my brothers to divide my father's property with me."

He said to him, "Man, who made me a divider?"

And turning to his disciples, he said, "Am I a divider?"

The printed unit is the this edition's current reconstruction of the inheritance-dispute refusal. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: inheritance-dispute refusal; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the inheritance-dispute refusal may preserve a compact saying or motif that circulated before later literary framing.

2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 73

### Reconstruction Status

- Main text: yes.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the harvest/workers saying. It belongs to the parable field: ordinary rural or household images are used to make a claim about recognition, growth, judgment, or loss. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: The harvest is great, but the workers are few. Ask the Lord to send workers into the harvest.

The printed unit is the this edition's current reconstruction of the harvest/workers saying. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: harvest/workers saying; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the harvest/workers saying may preserve a compact saying or motif that circulated before later literary framing.
2. Parabolic reading: the saying uses an ordinary image to make the reader reason from visible life toward hidden meaning.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 74

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 75

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists, but the unit is best handled through its source/thematic cluster before any reader decision. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 76

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 77

### Reconstruction Status

- Main text: no.
- Greek witness status: P.Oxy. 1 overlap for 77b only.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The logion has loaded Greek papyrus control in this edition, which gives it more than Coptic-only support while still leaving room for textual caution. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists, but the unit is best handled through its source/thematic cluster before any reader decision. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-witness reading: extant or partial Oxyrhynchus evidence gives this logion an additional material control, though fragmentary text still requires caution.

### **Uncertainty And Limits**

## Logion 78

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 79

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 80

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus;  
cluster-control: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. Treat in appendix through Logia 56 and 111; do not count cluster support as direct evidence-note coverage.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 81

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus wealth/renunciation cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Wealth/renunciation cluster-control v0.1 keeps this outside the main text: compact but internally controlled wealth/power/renunciation logic is not externally secure enough. The appendix therefore keeps possible reversal wisdom as apparatus material rather than clean text.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 82

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus fire/kingdom cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale and cluster-control v0.1 now exist; the saying is interpretively important but controlled mostly by internal Thomasine fire/kingdom symbolism. The appendix therefore explains why thematic fire control is not enough for main-text promotion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 83

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; control package: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 85

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; control package: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the foxes/birds/Son of Man homelessness core. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Foxes have holes, birds have nests, but the Son of Man has nowhere to lay his head.

The printed unit is the this edition's current reconstruction of the foxes/birds/Son of Man homelessness core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: foxes/birds/Son of Man homelessness core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the foxes/birds/Son of Man homelessness core may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 87

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; control package: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 88

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; control package: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the cup inside/outside core. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Why do you clean the outside of the cup? Do you not understand that the one who made the inside also made the outside?

The printed unit is the this edition's current reconstruction of the cup inside/outside core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: cup inside/outside core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the cup inside/outside core may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 90

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This is one of the attractive non-reader cases. Its invitation to rest is beautiful and theologically rich, but the wording is so close to Matthew 11:28-30 that this edition keeps it outside the earliest reconstructed text.

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present; Review C v0.1.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Review C keeps it outside main text because the evidence is dominated by Matthew 11:28-30 dependence risk. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.

5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

## **Uncertainty And Limits**

## Logion 91

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the 91A recognition-of-time core; full logion appendix only. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: You know how to read the face of heaven and earth, but you do not recognize this time.

The printed unit is the this edition's current reconstruction of the 91A recognition-of-time core; full logion appendix only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence rationale and control file present; Review C v0.1; controlled reader pass 46A/91A v0.1.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Controlled reader pass 46A/91A includes only the recognition-of-time core; the dialogue frame remains appendix only. The appendix therefore separates the recognition-of-time core from the fuller dialogue frame.

### Possible Interpretations

1. Early-core reading: the 91A recognition-of-time core; full logion appendix only may preserve a compact saying or motif that circulated before later literary framing.

2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

## **Uncertainty And Limits**

## Logion 92

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus seek/find cluster note.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale and cluster-control v0.1 now exist; seek/find core is embedded in collection-memory expansion. Keep full logion appendix only; possible opening core remains apparatus material.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.

5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

## **Uncertainty And Limits**

## Logion 93

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 94

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; seek-knock control; seek/find cluster note.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and seek/find cluster pass keeps it outside main text as strong but likely redundant with Logion 2. The appendix therefore explains why a strong tradition can remain appendix only when the motif is already represented by a stronger reader unit.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 95

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the money/non-repayment core. It belongs to the wealth and renunciation field: the saying tests the relation between possessions, desire, loss, and freedom. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: If you have money, do not lend at interest; give to the one from whom you do not expect to receive it back.

The printed unit is the this edition's current reconstruction of the money/non-repayment core. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: money/non-repayment core; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the money/non-repayment core may preserve a compact saying or motif that circulated before later literary framing.
2. Renunciation reading: the saying may expose how possession promises security while actually binding the person to anxiety, status, or loss.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the leaven core only. It belongs to the parable field: ordinary rural or household images are used to make a claim about recognition, growth, judgment, or loss. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: The kingdom is like a woman who took a little leaven and hid it in dough.

The printed unit is the this edition's current reconstruction of the leaven core only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: leaven core only; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the leaven core only may preserve a compact saying or motif that circulated before later literary framing.
2. Parabolic reading: the saying uses an ordinary image to make the reader reason from visible life toward hidden meaning.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 97

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale v0.1 now exists; possible independent parable lacks close external control. The appendix therefore keeps the evidence rationale visible and treats non-inclusion as an argued decision.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 98

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the true-family core only. It belongs to the family and discipleship field: kinship language is used to redefine loyalty, identity, and belonging. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Those who do the Father's will are my brothers and my mother.

The printed unit is the this edition's current reconstruction of the true-family core only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; true-family control; family-renunciation cluster note.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: true-family core only; family-renunciation cluster-control keeps the kingdom-of-Father ending in apparatus. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the true-family core only may preserve a compact saying or motif that circulated before later literary framing.
2. Discipleship reading: the saying may redefine kinship around obedience, insight, or loyalty rather than blood relation.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 100

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the Caesar/God tribute core only. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Give Caesar what belongs to Caesar, and God what belongs to God.

The printed unit is the this edition's current reconstruction of the Caesar/God tribute core only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: Caesar/God tribute core only; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the Caesar/God tribute core only may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

# Logion 101

## Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

## What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

## Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

## Sources And Controls

Primary source/control summary: direct evidence rationale plus family-renunciation cluster note.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

## Why It Is Or Is Not In The Reconstruction

This edition keeps this logion outside the clean text because the early element, if present, cannot yet be separated securely from transmission history or later interpretation. The appendix preserves the question rather than forcing a premature decision. Evidence rationale and cluster-control v0.1 now exist; family-renunciation opening is mixed with true-mother/life expansion. The appendix therefore keeps the possible early family-renunciation core as apparatus material rather than clean text.

## Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 102

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 103

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

Only the brief thief/watchfulness core is printed in the main text. The fuller Thomasine form remains appendix material because it expands the image into a wider scene of preparation and defense.

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: Blessed is the one who knows when the thief is coming and keeps watch before he comes.

The printed unit is the this edition's current reconstruction of the thief/watchfulness core only; full logion appendix only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; thief/watchfulness cluster note; control file; Review C v0.1.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated.

Thief/watchfulness cluster-control promotes only 103A as the main text representative of the motif; gathering-domain/girding expansion remains appendix only. The appendix therefore separates the short watchfulness core from the fuller Thomasine expansion and relates it to Logion 21.

### Possible Interpretations

1. Early-core reading: the thief/watchfulness core only; full logion appendix only may preserve a compact saying or motif that circulated before later literary framing.

2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

## **Uncertainty And Limits**

## Logion 104

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This saying has strong Gospel parallels around fasting and the bridegroom, but the Thomasine version is tied to ritual and bridal-chamber language. That makes it too entangled for clean extraction in this edition.

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present; ritual-ethics cluster; Review C v0.1; 104A follow-up v0.1.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Ritual-ethics / bridegroom follow-up keeps 104A outside the main text: strong Mark/Matthew/Luke controls, but no extant Greek Thomas witness and a Thomas ritual/bridal-chamber frame that is too entangled for clean extraction. The appendix therefore names both the strong synoptic control and the dependence or ritual-frame risk.

### Possible Interpretations

1. Early-core reading: the bridegroom-fasting core may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 105

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 106

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale present: local research apparatus.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale v0.1 now exists, but the unit is best handled through its source/thematic cluster before any reader decision. Use new evidence rationale to explain non-inclusion; keep full discussion in appendix.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 107

### Reconstruction Status

- Main text: yes.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the lost-sheep core only. It belongs to the parable field: ordinary rural or household images are used to make a claim about recognition, growth, judgment, or loss. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

This logion, or a controlled core within it, is printed in the clean English reconstruction:

Jesus said: A shepherd had one hundred sheep. One of them went astray; he left the ninety-nine and searched for it until he found it.

The printed unit is the this edition's current reconstruction of the lost-sheep core only. The commentary therefore explains that inclusion does not make every word of the received Thomasine form equally early.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition includes this unit because it has enough early-profile value to represent part of the reconstructed sayings gospel. The caution remains because the received Thomasine form, the Greek evidence, or the relation to parallels remains complicated. Current main-text unit: lost-sheep core only; included only with apparatus caution; full-form risks remain visible. The appendix therefore separates the printed core from the fuller received form and keeps the Greek status visible.

### Possible Interpretations

1. Early-core reading: the lost-sheep core only may preserve a compact saying or motif that circulated before later literary framing.
2. Parabolic reading: the saying uses an ordinary image to make the reader reason from visible life toward hidden meaning.

3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 108

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; no direct external control, with explicit card-level rationale.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 109

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 110

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note plus control package plus wealth/renunciation cluster note.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Wealth/renunciation cluster-control v0.1 keeps this outside the main text: the world-renunciation frame is strongly Thomasine and lacks close external wording control. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## Logion 111

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence rationale plus living/dead/world cluster note.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence rationale and cluster-control v0.1 now exist; heaven/earth passing, deathlessness, and world-unworthy motifs are composite. The appendix therefore separates the more controlled heaven/earth formula from weaker deathlessness and world-unworthy material.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 112

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note present: local research apparatus; control package: local research apparatus.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition defers this logion because it is best judged together with related sayings, source controls, or thematic clusters. Deferral is not dismissal; it means the evidence is not yet clean enough for a stronger reader decision. Evidence note now exists; current model keeps this outside the main text until a separate controlled reader decision changes it. The appendix therefore gives the source state, interpretive range, and reason for non-inclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

### **Uncertainty And Limits**

## Logion 113

### Reconstruction Status

- Main text: no.
- Greek witness status: Greek retroversion, hypothetical.

### What This Saying Is About

This section concerns the full logion. It belongs to the wider sayings tradition where brief images and aphorisms carry more weight than narrative explanation. For a paper reader, the first question is simple: what does this saying ask a person to notice, practice, reject, or reinterpret?

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: direct evidence; control/cluster present.

The Greek layer here is a controlled hypothetical retroversion, useful for comparison but not an extant manuscript witness. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition keeps this logion in the appendix because it is meaningful and controlled, but not strong enough to stand in the main reconstructed text for this edition. In other words, it matters for understanding the tradition even though it is not counted as part of the earliest recoverable layer. Evidence/control exists and current reviews keep it outside main text due to dependence, duplication, composite form, or appendix only fit. The appendix therefore explains why the tradition matters even though it is not printed in the clean reconstruction.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.

4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.
5. Greek-layer caution: the Greek wording used for comparison is hypothetical retroversion, not an extant manuscript witness.

### **Uncertainty And Limits**

## Logion 114

### Reconstruction Status

- Main text: no.
- Greek witness status: No loaded P.Oxy. witness.

### What This Saying Is About

This final scene is the clearest exclusion case. It stages Mary, Peter, and gender transformation in a way that looks like later community-boundary discourse rather than an early sayings-gospel unit.

### Text In This Edition

No main-text text is printed for this logion in the current English reconstruction. The logion remains visible here so that readers can see the evidence, the interpretive value, and the reason why it was not allowed into the main reconstructed text.

### Sources And Controls

Primary source/control summary: evidence note plus publication exclusion rationale plus control package.

For this edition the complete Coptic witness carries the main textual burden; no loaded Oxyrhynchus Greek witness is available for this logion. Coptic NHC II,2 remains the complete manuscript base for the received Thomas text; P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 are used where this project's loaded evidence supplies extant or partial Greek control. Canonical Greek parallels are controls, not Thomas witnesses.

### Why It Is Or Is Not In The Reconstruction

This edition excludes this logion from the clean reconstruction because it most likely belongs to a later interpretive or community-shaping layer. It is still discussed fully because exclusion must be argued, not hidden. Late/secondary Mary/Peter/gender-transformation frame; does not fit earliest sayings-gospel reconstruction under current method. The appendix therefore uses this logion as a transparent case study in exclusion.

### Possible Interpretations

1. Early-core reading: the full logion may preserve a compact saying or motif that circulated before later literary framing.
2. Wisdom reading: the saying may work as a compact challenge that forces the reader to rethink an ordinary assumption.
3. Editorial reading: the received Thomas form may have expanded, combined, or reframed an older unit in a way that now requires caution.
4. Appendix-only reading: the logion can still illuminate the tradition even when it is not printed as part of the reconstructed main text.

5. Source-caution reading: without a loaded Oxyrhynchus Greek witness, the Coptic witness carries the main textual weight for this edition.

## **Uncertainty And Limits**

## **Evidence Dossier And Methodological Defense**

# Evidence Dossier For The Earliest Sayings Gospel Reconstruction

## Thesis

This dossier defends a selective reconstruction of the earliest recoverable sayings-gospel layer preserved within the Gospel of Thomas tradition. It is not a translation of the complete Coptic Gospel of Thomas, and it is not a maximal anthology of attractive or spiritually powerful sayings.

The reconstruction asks a narrower question: which sayings, or smaller cores within sayings, can responsibly be printed as part of an earliest recoverable sayings gospel when the available Coptic witness, Greek papyri, canonical controls, internal Thomas evidence, and redactional risks are weighed together?

The current main text contains 37 logia or cautiously included cores. Every other Thomas logion remains available in the full appendix, with explanation. Exclusion or deferral is therefore not erasure; it is a reconstruction judgment.

## Scope Of The Dossier

This dossier is the English evidence layer for reviewers and readers who want to understand the logic behind the clean reconstruction. It should be read together with:

- the clean reconstructed reader;
- the full 114-logion appendix;
- the all-114 publication decision table;
- logion-level evidence notes;
- cluster-control notes;
- source and rights registers.

Repository paths are retained here because this dossier also belongs to the digital scholarly companion. A future paper edition should convert these into print-safe references: logion numbers, manuscript labels, canonical references, bibliography keys, and indexes.

## Source Hierarchy

This edition weighs sources in this order:

1. Extant manuscript witnesses and facsimiles.
2. P.Oxy. 1, P.Oxy. 654, and P.Oxy. 655 where a Greek Thomas witness is actually preserved.
3. Coptic NHC II,2 as the complete preserved Coptic witness.
4. DCLP / Papyri.info TEI XML and other open transcriptions as working access points to the Greek papyri.
5. Canonical Greek controls, currently using the local SBLGNT extraction layer, for testing shared tradition and dependence.
6. Explicitly cautious Greek retroversions from Coptic where a Greek Vorlage or Greek circulation is historically plausible.
7. Academic editions and secondary scholarship, used for verification and interpretation, not reproduced as base text without rights clearance.
8. Modern translations only as controls, never as the base text of the reconstruction.

The current source register marks several materials as conditionally verified rather than finally verified. This is a real remaining publication task, not a hidden assumption.

## Reconstruction Method

Each unit is evaluated independently. A unit may be a whole logion or a smaller core inside a logion.

This edition distinguishes:

- reconstructed early core;
- extant Coptic witness;
- extant Greek witness;
- hypothetical Greek retroversion;
- possible expansion;
- secondary redaction;
- unresolved textual problem.

The decision categories are:

- **INCLUDE**: print in the clean reconstruction.
- **included with caution**: print in the clean reconstruction but explain uncertainty in the apparatus.
- **uncertain**: keep outside the clean text, but treat seriously in the appendix.
- **kept in the appendix with a stable rationale**: do not print in the main text under the current model, but explain as important controlled material.
- **deferred to cluster review / deferred**: keep outside the main text pending cluster or evidence work.
- **EXCLUDE\_AS\_SECONDARY**: classify as secondary or redactional for the purpose of reconstructing the earliest sayings gospel.

## Clean-Reader Selection Principles

The main text is intentionally conservative. A saying is not included merely because it is beautiful, famous, radical, or plausibly old.

A unit is stronger for main-text inclusion when it has several of these features:

- compact aphoristic, parabolic, or wisdom form;
- extant Greek Thomas support, or strong recoverability from the Coptic;
- multiple or strong external controls;
- weak signs of later Thomasine expansion;
- ability to isolate an early core without arbitrary surgery;
- coherence with other included units without depending on that coherence alone.

A unit is weaker for main-text inclusion when it is:

- heavily dialogical or scenic;
- dependent-risky through one narrow canonical parallel;
- visibly composite;
- strongly shaped by later community boundary concerns;
- mainly supported by internal Thomasine themes;
- attractive as theology but not secure as early recoverable text.

## Greek Witness And Retroversion Policy

Absence of an extant Greek witness does not prove that a Greek form never existed. Coptic Thomas likely preserves material that circulated in Greek or moved through Greek tradition before the surviving Coptic manuscript.

However, a reconstructed Greek form is not a manuscript witness. Every retroversion must be labeled Greek retroversion, hypothetical and must not be weighed like P.Oxy. 1, P.Oxy. 654, P.Oxy. 655, or another extant witness.

After the Greek publication-polish pass of 2026-07-18, the public-facing Greek and parallel layers use normalized status language so that manuscript evidence and scholarly reconstruction cannot be confused.

The Greek layer therefore has four different statuses:

- extant Greek witness: actually preserved in a loaded Greek Thomas papyrus witness;
- partial extant Greek witness: preserved only in part;
- lacunose extant Greek witness: preserved or reconstructed in a Greek papyrus witness with major lacunae;
- hypothetical retroversion: a scholarly reconstruction from Coptic and controls.

## Probability And Reader-Decision Control

This edition does not use probability scores as an automatic inclusion rule. A high early score means that a motif, form, or partial core may plausibly belong to an early tradition. It does not prove that the preserved Thomas form is clean enough to print in the reconstructed reader.

This distinction controls the main tension cases:

- Logion 1 has been moved out of the main text and remains in the appendix as a cautious collection-frame / prologue unit because of its late-leaning profile.
- Logia 64, 76, 78, 79, 90, 93, 94, 104, 109, and 113 remain outside the main text despite early-score pressure because they are composite, dependent-risky, duplicative of a stronger reader unit, or not yet safely separated into a short core.

The final edition should preserve this principle in reader-friendly prose: probability of early tradition is not identical to main-text inclusion.

## Cluster-Control Method

Cluster-control notes prevent two opposite errors:

1. treating every related saying as equally early;
2. excluding difficult sayings without explanation.

A cluster may include one representative in the main text while keeping related sayings in the appendix. This is not inconsistency. It is a way of showing that a motif may be early while a preserved form may still be composite, dependent-risky, or secondary.

The major completed cluster controls include beatitudes, seek/find, family-renunciation, fire/kingdom, thief/watchfulness, wealth/renunciation, ritual-ethics / bridegroom, and living/dead/world. Further minor triage may still be needed for body/soul, polemical authority, mountain/unity, and father/mother/birth material.

## Current Reader Block

The current reconstructed reader block covers 37 logia or cautiously included cores:

1, 2, 3, 4, 5, 6, 9, 10, 16, 20, 22, 25, 26, 31, 32, 33, 34, 35, 36, 39, 41, 45A, 46A, 47B, 54, 63, 72, 73, 86, 89, 91A, 95, 96, 99, 100, 103A, and 107.

These are not presented as certain ipsissima verba of Jesus. They are the current best-supported reconstruction units under this edition's method.

## Cluster Summaries

### **Beatitudes Cluster**

Cluster note: .

Decision implication: Logion 54 remains in the main text with caution; Logia 58, 68, and 69 remain appendix only.

Reason: the beatitude form is a genuine early-tradition form, but form alone is not enough for inclusion. Logion 54 is short and strongly controlled by Luke 6:20 and Matthew 5:3. Logia 68 and 69 have real persecution and hunger beatitude controls, but their Thomas forms are distinctive and difficult. Logion 58 is plausible wisdom material but lacks close direct control.

### **Seek / Find Cluster**

Cluster note: .

Decision implication: Logion 2 remains in the main text with caution; Logia 92 and 94 remain appendix only.

Reason: Logion 2 has the strongest position in the cluster because it is programmatic and has P.Oxy. 654 support, even though the Greek witness is lacunose and the ending differs from the Coptic. Logion 92 has a strong seek/find opening but embeds it in collection-memory expansion. Logion 94 is short and strongly controlled by Matthew 7:7-8 and Luke 11:9-10, but it likely duplicates the seek/find motif already represented by Logion 2.

### **Family-Renunciation Cluster**

Cluster note: .

Decision implication: Logia 16 and 99 remain in the main text as cautiously included cores; Logia 55 and 101 remain appendix only.

Reason: the cluster contains several related but not identical ideas: social conflict caused by Jesus' message, true kinship defined by doing God's will, radical family-renunciation, cross-bearing discipleship, and Thomasine symbolic mother/life language. Logion 16 has strong Matthew/Luke controls for the division / household-conflict core. Logion 99 has strong Mark/Matthew/Luke controls for the true-family core. Logion 55 is important but joins hate-family language to cross-bearing and worthiness language. Logion 101 has a controlled family-renunciation opening, but it is mixed with true-mother / life symbolism.

### **Fire / Kingdom Cluster**

Cluster note: .

Decision implication: Logion 10 remains in the main text as a cautious fire-casting core; Logion 82 remains appendix only.

Reason: Luke 12:49 strongly controls the compact fire-casting core in Logion 10. The full Thomas 10 continuation about watching or guarding the fire until it blazes remains outside the main text because it differs from Luke and may reflect Thomasine symbolic development. Logion 82 is vivid and important, but its support is mostly internal and thematic.

### **Wealth / Renunciation Cluster**

Cluster note: .

Decision implication: Logia 63, 72, 95, and 100 remain in the main text as cautiously included cores. Logia 64, 76, 81, 90, 109, and 110 remain appendix only or deferred.

Reason: the cluster contains several related but not identical forms: rich-fool warning, inheritance refusal, lending without repayment, Caesar/God possession boundary, banquet exclusion, pearl/treasure imagery, yoke/rest invitation, hidden treasure expansion, and world-renunciation aphorisms. The main text uses controlled representatives rather than printing every attractive wealth saying.

### **Thief / Watchfulness Cluster**

Cluster note: .

Decision implication: Logion 103A remains in the main text as a cautious thief/watchfulness core. Full Logion 103 and full Logion 21 remain appendix only.

Reason: Matthew 24:43 and Luke 12:39 strongly control the householder/thief warning. Logion 21 provides internal Thomas support for the same motif, but it is too composite to print as a clean representative.

## Major Appendix-Only And Exclusion Cases

The following high-impact cases are especially important for reviewers because they show why this edition is selective rather than maximal.

| Logion | Current status                               | Reason for non-inclusion                                                                                                                                                           |
|--------|----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 64     | kept in the appendix with a stable rationale | Banquet core is important, but the Thomas form is long, dependence-risky, and has an anti-merchant ending.                                                                         |
| 76     | kept in the appendix with a stable rationale | Pearl and treasure motifs are strong but chained compositely and mainly Matthew-controlled.                                                                                        |
| 90     | kept in the appendix with a stable rationale | Yoke/rest invitation is too close to Matthew 11:28-30 under current evidence.                                                                                                      |
| 93     | kept in the appendix with a stable rationale | Strong Matthean control, but secrecy function and one-source control require caution.                                                                                              |
| 94     | kept in the appendix with a stable rationale | Strong seek/knock saying, but likely redundant with Logion 2 in the clean reconstruction.                                                                                          |
| 104    | kept in the appendix with a stable rationale | Bridegroom-fasting core has strong Mark/Matthew/Luke controls, but no extant Greek Thomas witness and a Thomas ritual/bridal-chamber frame too entangled for main-text extraction. |
| 109    | kept in the appendix with a stable rationale | Hidden treasure is attractive, but Matthew-only control plus inheritance/sale/usury expansion is risky.                                                                            |
| 113    | kept in the appendix with a stable rationale | Kingdom-not-observed motif is already better represented by Logion 3; Thomas ending is distinctive.                                                                                |
| 114    | EXCLUDE_AS_SECONDARY                         | Mary/Peter/gender-transformation scene belongs to a later community-boundary layer under current method.                                                                           |

## Uncertainty Model And Alternative Reconstructions

This reconstruction is probabilistic and revisable. This edition does not claim certainty about the historical origin of every included or excluded unit.

Reasonable alternative reconstructions could:

- print a larger Thomas-like sayings collection;
- include more high-early appendix only material with heavier cautions;
- exclude all Coptic-only units without extant Greek witness;
- prioritize canonical independence more strongly;
- treat Thomasine internal coherence as stronger evidence than this project does.

This project chooses a middle path: it includes cautiously included units when an early core can be responsibly isolated, but it refuses to print whole preserved logia when the evidence points to composite, dependent, or secondary formation.

## Bibliography, Rights, And Citation Note

Current working rules:

- protected modern translations are not used as the base text;
- public-domain or openly licensed resources may be used with attribution;
- SBLGNT is treated as the current open Greek canonical control, with final publication verification still required;
- Brill, Layton, DeConick, Patterson, Meyer, and other modern academic works are used as scholarly controls and must not be reproduced beyond lawful citation.

The final dossier needs a consolidated bibliography, stable source snapshots or reproducibility notes, and print-safe citation keys before it should be called fully publication-ready.

## Included Logia And Core Summaries

## Logion 1 Summary

Decision: appendix only collection frame.

Logion 1 is retained as a cautious collection frame:

Whoever finds the interpretation of these words will not taste death.

Reason: it is integral to the transmitted Greek/Coptic frame of the collection, but its function is hermeneutical and collection-level. It should not be treated as an independently secure earliest Jesus saying without further evidence.

## Logion 2 Summary

Decision: seek/find core included with caution; expansion appendix only.

The search/find core is included as a likely early or shared traditional motif:

Let the one who seeks not stop seeking until they find.

The following sequence is retained in the apparatus, not in the clean reconstruction:

When they find, they will be disturbed; when disturbed, they will be amazed; and they will reign.

Reason: Matthew 7:7 and Luke 11:9 preserve a search/find motif, but Thomas 2 does not reproduce the full synoptic triad "ask / seek / knock." Thomas expands the search/find motif into a distinctive sequence of disturbance, amazement, reigning, and possibly rest. Because the expansion looks developed and because the Greek and Coptic endings diverge, the clean reconstruction now prints only the short search/find core.

Cluster note: .

## Logion 3 Summary

Decision: included with caution

The kingdom core is included:

Do not seek the kingdom as a place in heaven or in the sea. The kingdom is within you and outside you.

The self-knowledge continuation is retained with a caution because it is more distinctively Thomasine and textually complex.

Synoptic evidence table: .

The strongest synoptic contact is Luke 17:21, especially ἐντὸς ὑμῶν. The comparison supports a shared non-localized kingdom motif, but Thomas has distinctive features: heaven/sea, outside-you, and self-knowledge. Direct literary dependence is not established.

## Logion 4 Summary

Decision: included with caution

The first/last formula is included:

Many who are first will become last, and the last first.

The seven-day child image and final becoming-one motif are retained only with a caution.

Synoptic evidence table: .

The first/last core has strong formulaic parallels in Mark 10:31 and Matthew 19:30, with additional parallels in Matthew 20:16 and Luke 13:30. The broader Thomasine frame has no direct synoptic support.

## Logion 5 Summary

Decision: included with caution

The hidden/revealed maxim is included:

Nothing is hidden that will not become manifest.

The "before your face" command is retained with a caution as a possible Thomasine wisdom frame.

Synoptic evidence table: .

The hidden/revealed core has strong synoptic support, especially Luke 8:17, Matthew 10:26, and Luke 12:2. Mark 4:22 preserves the same motif in a different formulation. The "before your face" command remains cautious.

## Logion 6 Summary

Decision: included with caution for the short ethical core; full Logion 6 remains uncertain.

Marked reader text:

Do not lie, and do not do what you hate.

Reason: the extant logion combines ritual-practice questions, ethical instruction, and a hidden/revealed motif. The full unit remains a complex ritual-ethics composition and should not be added as a whole.

The short ethical core, however, has a stronger independent profile. The second clause is closely controlled by Tobit 4:15 (καὶ ὁ μισεῖς, μηδενὶ ποιήσης). The prohibition of lying has strong Jewish and early-Christian controls, especially Leviticus 19:11 and Colossians 3:9. Matthew 7:12 and Luke 6:31 preserve the positive Golden Rule form, while Didache 1:2 gives an early Christian reciprocity control closer to the negative form.

The caution remains necessary because P.Oxy. 654 is lacunose at the key phrase and the core is embedded in a complex Thomasine ritual-practice unit.

Cluster note: .

Synoptic and early-Christian control table: .

Ethical-core table: .

## Ritual-Ethics Cluster Summary

The control cluster covers Thomas 6, 14, 27, and 104.

Current decisions:

| Logion | Decision                                                     | Reason                                                                                                                                                                                    |
|--------|--------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6      | ethical core included with caution;<br>full logion uncertain | The short core has strong Jewish and early-Christian ethical controls, but the full unit is compositionally complex.                                                                      |
| 14     | deferred                                                     | Control unit for ritual critique, mission, food, and speech-defilement; no loaded Greek Oxyrhynchus witness.                                                                              |
| 27     | uncertain                                                    | Complete Coptic, strong P.Oxy. 1 Greek witness, and P.Oxy. 5575 control; still excluded from the reader because it spiritualizes ritual practice and has only thematic synoptic controls. |
| 104    | kept in the appendix with a stable rationale                 | Strong bridegroom-fasting controls in Mark/Matthew/Luke, but no loaded Greek Oxyrhynchus witness and too much Thomas ritual/bridal-chamber framing for clean extraction.                  |

Conclusion: the full Thomas 6 composition should not be added to the main reconstructed text. The short ethical core may be added with a caution. Logion 27 has been separately deepened and moved from deferred to uncertain, but it remains outside the reader text. Logion 104A has now been reviewed and remains kept in the appendix with a stable rationale; the full Logion 104 remains appendix only.

## Logion 7 Summary

Decision: uncertain.

Reason: the lion/human saying is symbolically dense, has no direct synoptic parallel entered at this stage, and the Greek witness is mostly reconstructed. Wider ancient parallels must be researched before inclusion.

## Logion 8 Summary

Decision: uncertain.

Possible candidate:

A wise fisher chose one large good fish from many small fish.

Reason: Thomas 8 is compact and may preserve an independent parable. Matthew 13:47-48 provides a thematic net/fish/sorting control, but the structures differ too sharply for reader inclusion. Matthew's parable concerns the kingdom and sorting good from bad; Thomas concerns a wise fisher choosing one large good fish from many small fish. No loaded Greek Thomas witness preserves Logion 8.

Synoptic evidence table: .

Reconstruction implication: do not add Logion 8 to the main reader text yet.

## Logion 9 Summary

Decision: sower core included with caution; full Logion 9 uncertain.

Included cautiously included core:

A sower went out to sow. Some seed fell on the road, some on rock, some among thorns, and some on good earth; only the good earth bore fruit.

Reason: Thomas 9 has strong synoptic controls in Mark 4:3-9, Matthew 13:3-9, and Luke 8:5-8, and it preserves the parable without the allegorical interpretation found in Mark 4:13-20, Matthew 13:18-23, and Luke 8:11-15. This supports printing the short non-allegorical core with a caution. However, no loaded Greek Oxyrhynchus witness preserves Thomas 9, and the direction of dependence remains unresolved. Distinctive Thomas details, especially the worm, fruit upward to heaven, and the 60 / 120 yield, remain outside the reader text.

Synoptic evidence tables: ; .

Reconstruction implication: add only the short cautious sower core to the main reader text. Any Greek form must be labeled Greek retroversion, hypothetical.

## Logion 10 Summary

Decision: fire-casting core included with caution; full Logion 10 uncertain.

Included cautiously included core:

I cast fire upon the world.

Reason: Thomas 10 has a strong synoptic control in Luke 12:49, where Jesus says that he came to cast fire upon the earth. The short fire-casting core is compact and plausibly belongs to an early crisis/apocalyptic sayings tradition. However, no loaded Greek Oxyrhynchus witness preserves Thomas 10, and the Thomas continuation, "I am watching/guarding it until it blazes," differs from Luke and may be Thomasine symbolic reshaping. Thomas 16 and Thomas 82 show that fire is also part of Thomas's internal symbolic vocabulary.

Synoptic evidence table: .

Cluster-control note: .

Reconstruction implication: add only the short cautious fire-casting core to the main reader text. Keep the watching/blazing continuation in the apparatus. Any Greek form must be labeled Greek retroversion, hypothetical.

## Logion 11 Summary

Decision: uncertain.

Strongest possible subunit:

This heaven will pass away, and the one above it will pass away.

Reason: the heaven-passing motif has partial synoptic controls in Mark 13:31, Matthew 24:35, and Luke 21:33. However, the synoptic formula is "heaven and earth will pass away, but my words will not pass away," while Thomas 11 has "this heaven and the one above it" and lacks the enduring-words contrast. The rest of Thomas 11 combines dead/living paradox, eating what is dead, light language, and one/two anthropology. These belong more naturally to Thomasine symbolic development than to a secure earliest sayings layer.

Synoptic evidence table: .

Reconstruction implication: do not add Logion 11 to the main reader text yet. Any Greek form must be labeled Greek retroversion, hypothetical.

## Logion 16 Summary

Decision: division/household core included with caution; full Logion 16 uncertain.

Included cautiously included core:

I did not come to bring peace, but division; a household will be divided.

Reason: Thomas 16 has strong synoptic controls in Matthew 10:34-36 and especially Luke 12:51-53. Luke is the closest structural control because of the five-in-one-house and three-against-two / two-against-three pattern. Matthew is important because Thomas includes the sword motif. However, Thomas also combines fire, sword, war, a Luke-like household structure, and a final monachos closure. This makes the extant form likely harmonized, developed, or Thomasine-redacted.

Synoptic evidence table: .

Cluster-control note: .

Reconstruction implication: include only the cautious short division/household core in the main reader text. Do not include the fire/sword/war sequence or the monachos ending. Any Greek form must be labeled Greek retroversion, hypothetical.

## Logion 20 Summary

Decision: included with caution

Possible early core:

The kingdom is like a mustard seed: it is small, but it grows and gives shelter to the birds of heaven.

Reason: Thomas 20 has strong synoptic controls in Mark 4:30-32, Matthew 13:31-32, and Luke 13:18-19. The parable core is short, memorable, agrarian, and multiply attested. Thomas is especially close to Mark in the branch motif, while also sharing "kingdom of heaven" language with Matthew. The branch/tree follow-up strengthens the case that Thomas 20 is an important witness to a mobile parable tradition, but it does not prove Thomasine priority or independence. No loaded Greek Oxyrhynchus witness preserves Thomas 20, and the direction of dependence remains unresolved.

Branch/tree follow-up: .

Synoptic evidence table: .

Reconstruction implication: include Logion 20 in the main reader text with a caution. Any Greek form must be labeled Greek retroversion, hypothetical.

## Logion 22 Summary

Decision: children/kingdom core included with caution; full logion uncertain.

Possible early core:

Little children are like those who enter the kingdom.

Reason: the children-and-kingdom motif has strong synoptic controls in Mark 10:14-15, Matthew 18:3-4, Matthew 19:14, and Luke 18:16-17. Thomas 22 preserves a compact positive form at the start of the logion. However, the extant unit then expands into a long unity-of-opposites sequence: two become one, inside/outside, upper/lower, male/female, and eye/hand/foot/image replacement. This expansion is important for Thomasine theology, but it is not securely recoverable as the earliest gospel layer.

Synoptic evidence table: .

Reconstruction implication: include only the short children/kingdom core in the main reader text with a caution. Keep the unity-of-opposites expansion in the apparatus. Any Greek form must be labeled Greek retroversion, hypothetical.

## Logion 25 Summary

Decision: included with caution

Marked reader text:

Love your brother as your own soul; guard him like the apple of your eye.

Reason: Thomas 25 is short, ethical, and strongly rooted in Jewish and synoptic love-command tradition. The core has strong controls in Leviticus 19:18, Mark 12:31, Matthew 22:39, and Luke 10:27. The apple-of-the-eye clause has biblical and wisdom controls in Deuteronomy 32:10, Psalm 17:8, and Proverbs 7:2. The saying remains treated cautiously because Thomas has "brother" rather than the broader "neighbor," because the second clause may be an expansion, and because no loaded Greek Thomas 25 witness is available.

Synoptic and scriptural evidence table: .

Reconstruction implication: include Logion 25 in the Ukrainian reader text with a caution.

## Logion 26 Summary

Decision: included with caution

Marked reader text:

First remove the beam from your own eye; then you will see clearly to remove the speck from your brother's eye.

Reason: Thomas 26 has a strong evidence profile: complete Coptic Thomas, partial Greek P.Oxy. 1, and close parallels in Matthew 7:3-5 and Luke 6:41-42. The Greek witness preserves the final clause, corresponding to "then you will see clearly to remove the speck from your brother's eye." The saying remains treated cautiously because P.Oxy. 1 is fragmentary and the direction of dependence between Thomas and the synoptic tradition remains unresolved.

Synoptic evidence table: .

Reconstruction implication: include Logion 26 in the Ukrainian reader text with a caution.

## Logion 27 Summary

Decision: uncertain

Extant saying:

If you do not fast from the world, you will not find the kingdom; if you do not sabbatize the Sabbath, you will not see the Father.

Reason: Thomas 27 is strongly attested as a transmitted saying. The Coptic text is complete, P.Oxy. 1 preserves the whole saying in Greek, and P.Oxy. 5575 gives an additional early control for related material in a mixed sayings environment. This makes Logion 27 important for the history of Thomas-like sayings in Greek.

The reconstruction problem is different: its key formulas have only thematic, not direct, synoptic controls. Matthew 6:16-18 regulates fasting, Mark 2:18-20 and parallels treat bridegroom-fasting, and Mark 2:23-28 with parallels treat Sabbath controversy, but none independently confirms "fast from the world" or "sabbatize the Sabbath" as an early recoverable core. The saying fits the Thomas ritual-ethics cluster and probably represents symbolic or ascetic reinterpretation of ritual practice.

Synoptic and early-control table: .

Reconstruction implication: do not add Logion 27 to the main reader text. Use it in the apparatus and evidence dossier as a well-attested but reconstructionally uncertain ritual-symbolic saying.

## Logion 31 Summary

Decision: included with caution

Marked reader text:

A prophet is not accepted in his own homeland.

Marked paired expansion:

Nor does a physician heal those who know him.

Reason: Thomas 31 has complete Coptic Thomas, strong Greek P.Oxy. 1, and close synoptic controls in Mark 6:4, Matthew 13:57, and Luke 4:24. The prophet-in-homeland core is a short, widely attested proverbial unit. The physician clause is preserved in Thomas and P.Oxy. 1, but its external control is weaker; Luke 4:23 provides a related physician proverb in the same context, not the same saying.

Synoptic evidence table: .

Reconstruction implication: include Logion 31 in the Ukrainian reader text with a caution; do not treat the physician clause as equally secure as the prophet core.

## Logion 32 Summary

Decision: included with caution

Marked reader text:

A city built and established on a high mountain can neither fall nor be hidden.

Reason: Thomas 32 has complete Coptic Thomas, strong Greek P.Oxy. 1, and a close synoptic control in Matthew 5:14. The city-on-mountain core is strong. The fuller Thomas/P.Oxy. form, with "built/established" and "cannot fall," may preserve an independent fuller version or may be an expansion.

Synoptic evidence table: .

Reconstruction implication: include Logion 32 in the Ukrainian reader text with a caution.

## Logion 33 Summary

Decision: included with caution

Marked reader units:

What you hear in your ear, proclaim from your rooftops.

No one lights a lamp and puts it under a basket or in a hidden place; it is put on a lampstand so that its light may be seen.

Reason: Thomas 33 is composite but strongly supported at the level of its two subunits. The ear/rooftop unit has strong controls in Matthew 10:27 and Luke 12:3. The lamp/lampstand unit has strong controls in Mark 4:21, Matthew 5:15, Luke 8:16, and Luke 11:33. P.Oxy. 1 preserves only the opening of Thomas 33; therefore the lamp section has no extant Greek Thomas witness in P.Oxy. 1 and should require a cautious hypothetical Greek retroversion in the Greek layer.

Synoptic evidence table: .

Reconstruction implication: include Logion 33 in the Ukrainian reader text with a split-unit caution.

## Logion 34 Summary

Decision: included with caution

Marked reader text:

If a blind person leads a blind person, both fall into a pit.

Reason: Thomas 34 has complete Coptic and very strong controls in Matthew 15:14 and Luke 6:39. The saying is a short portable proverb. Thomas lacks the wider Matthean polemical frame, which may preserve a compact form or may reflect abbreviation.

Greek note: no loaded extant Greek Thomas witness preserves Logion 34. Any Greek form should be labeled Greek retroversion, hypothetical, controlled by Matthew and Luke.

Synoptic evidence table: .

Reconstruction implication: include Logion 34 in the Ukrainian reader text with a caution.

## Logion 35 Summary

Decision: included with caution

Marked reader text:

No one can enter the strong man's house and plunder it unless he first binds the strong man.

Reason: Thomas 35 has complete Coptic and strong controls in Mark 3:27 and Matthew 12:29. Luke 11:21-22 is a related but more developed form. The short strong-man image is therefore promising, though its original rhetorical setting remains unresolved.

Greek note: no loaded extant Greek Thomas witness preserves Logion 35. Any Greek form should be labeled Greek retroversion, hypothetical, controlled primarily by Mark and Matthew.

Synoptic evidence table: .

Reconstruction implication: include Logion 35 in the Ukrainian reader text with a caution.

## Logion 36 Summary

Decision: included with caution

Marked reader text:

Do not be anxious from morning until evening and from evening until morning about what you will wear.

Reason: Thomas 36 has a complete short Coptic form, an extant Greek P.Oxy. 655 witness, and strong controls in Matthew 6:25-34 and Luke 12:22-31. P.Oxy. 5575 gives an additional early control for related material in a mixed sayings environment.

The caution remains necessary because the Coptic Thomas form is short and focused on clothing, while P.Oxy. 655, Matthew/Luke, and P.Oxy. 5575 point to a broader and textually fluid complex involving food, clothing, lilies, and divine provision. Therefore the reader should print only the short anti-anxiety / clothing core.

Synoptic evidence table: .

Reconstruction implication: include Logion 36 in the Ukrainian reader text with a caution; keep the fuller food/lilies complex in the apparatus.

## Logion 39 Summary

Decision: included with caution

Marked reader units:

The scribes and Pharisees took the key(s) of knowledge; they did not enter, and they did not allow those entering to enter.

Be wise as serpents and pure as doves.

Reason: Thomas 39 has complete Coptic, Greek P.Oxy. 655, and strong synoptic controls. Luke 11:52 is especially close for the key of knowledge, not entering, and obstructing others. Matthew 23:13 gives a parallel polemical structure. Matthew 10:16 closely controls the serpent/dove saying.

The caution remains necessary because the transmitted Thomas form is composite. The two sayings should be printed as split cautiously included units, not as one uncautious primitive composition.

Synoptic evidence table: .

Reconstruction implication: include Logion 39 in the Ukrainian reader text with split-unit cautions.

## Logion 41 Summary

Decision: included with caution

Marked reader text:

Whoever has will be given more; whoever does not have will lose even the little that they have.

Reason: Thomas 41 preserves a compact has/given formula with very strong synoptic controls in Mark 4:25, Matthew 13:12, Matthew 25:29, Luke 8:18, and Luke 19:26. The saying is short, aphoristic, portable, and broadly attested across different synoptic contexts. This makes it a strong candidate for early circulating tradition.

The caution remains necessary because no loaded extant Greek Thomas witness preserves Logion 41, because Thomas has distinctive "in hand" and "little" wording, and because standalone transmission may reflect either early oral form or later extraction from parabolic contexts.

Greek note: no loaded extant Greek Thomas witness preserves Logion 41. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Reconstruction implication: include Logion 41 in the Ukrainian reader text with a caution; do not treat the hypothetical Greek retroversion as manuscript evidence.

## Logion 45 Summary

Decision: 45A included with caution; full Logion 45 uncertain; 45B kept in the appendix.

Marked reader text:

Grapes are not gathered from thorns, nor figs from thistles.

Reason: the grapes/thorns and figs/thistles core is short, aphoristic, and strongly controlled by Matthew 7:16 and Luke 6:44. It is the cleanest part of the transmitted Thomas 45 complex and can be printed without importing the full tree/fruit/heart/speech chain.

The caution remains necessary because no loaded extant Greek Thomas witness preserves Logion 45, and because the full Thomas form is composite. The good/evil heart-treasure continuation is also strongly controlled, especially by Luke 6:45, but it is more developed and more tightly joined to the larger Luke 6 complex. The controlled reader pass therefore prints only 45A.

Greek note: no loaded extant Greek Thomas witness preserves Logion 45. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Reconstruction implication: include only the grapes/thorns core in the Ukrainian reader text with a caution; keep the heart-treasure continuation and full logion in the appendix.

## Logion 47 Summary

Decision: 47B included with caution; full Logion 47 uncertain.

Marked reader text:

A servant cannot serve two masters: he will honor one and despise the other.

Reason: the two-masters core is compact, memorable, and strongly controlled by Matthew 6:24 and Luke 16:13. It is the strongest subunit in a longer Thomas chain of incompatibility sayings.

The caution remains necessary because no loaded extant Greek Thomas witness preserves Logion 47, and because the full Thomas logion joins several units: two horses/two bows, two masters, wine, wineskins, and patch sayings. The clean reconstruction prints only the two-masters core.

Greek note: no loaded extant Greek Thomas witness preserves Logion 47. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Reconstruction implication: include only the two-masters core in the Ukrainian reader text with a caution; keep the wider incompatibility chain in the appendix.

## Logion 54 Summary

Decision: included with caution

Marked reader text:

Blessed are the poor, for the kingdom of heaven belongs to you.

Reason: Thomas 54 is one of the shortest and strongest beatitude candidates in the current reconstruction. Luke 6:20 closely controls the direct address to the poor and the "yours" form, while Matthew 5:3 controls the kingdom-of-heaven wording. The compact poor/kingdom beatitude plausibly belongs to an early shared beatitude tradition.

The caution remains necessary because Thomas appears to stand between Lukan and Matthean forms: "poor" is closer to Luke, while "kingdom of heaven" is closer to Matthew. This may reflect shared tradition, secondary harmonization, Coptic transmission, or Thomasine wording. Direction of dependence remains unresolved.

Greek note: no loaded extant Greek Thomas witness preserves Logion 54. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Cluster note: .

Reconstruction implication: include Logion 54 in the Ukrainian reader text with a caution; a shorter early core may be "Blessed are the poor, for yours is the kingdom."

## Logion 63 Summary

Decision: rich-fool core included with caution; full Logion 63 uncertain.

Marked reader text:

A rich man had many possessions. He planned to sow, reap, plant, and fill his storehouses so that he would lack nothing. That night he died.

Reason: Thomas 63 and Luke 12:16-21 share the same basic anti-wealth parable architecture: abundance, storage planning, imagined security, and sudden death. The Thomas form is shorter and less explicitly moralized than Luke's version, which makes it plausible as a compact parable core.

The caution remains necessary because no loaded extant Greek Thomas witness preserves Logion 63, and Luke-dependence remains possible. The reader therefore prints only the short story core, without the hearing formula and without adding Luke's explicit moral conclusion.

Greek note: no loaded extant Greek Thomas witness preserves Logion 63. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Coptic extraction: .

Reconstruction implication: include the short rich-fool core in the Ukrainian reader text with a caution; keep Luke-dependence warning visible in apparatus and publication dossier.

## Logion 72 Summary

Decision: included with caution

Marked reader text:

A man asked Jesus to make his brothers divide the father's property with him. Jesus refused the role of divider and asked, "Am I a divider?"

Reason: Thomas 72 and Luke 12:13-15 share a distinctive inheritance-dispute scene. In both, a man asks Jesus to intervene in a family inheritance matter, and Jesus refuses the role of judge or divider. The scene is concrete, socially plausible, and not dependent on later ecclesial doctrine. Thomas preserves a compact version that may represent an extracted or shorter refusal saying.

The caution remains necessary because Luke is the only major synoptic control currently entered, and literary direction remains unresolved. Luke may expand a short refusal saying into an anti-greed discourse, or Thomas may abbreviate Luke's scene.

Greek note: no loaded extant Greek Thomas witness preserves Logion 72. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Reconstruction implication: include Logion 72 in the Ukrainian reader text with a caution; keep Luke-dependence as an explicit warning in the apparatus.

## Logion 73 Summary

Decision: included with caution

Marked reader text:

The harvest is great, but the workers are few. Ask the Lord to send workers into the harvest.

Reason: Thomas 73 preserves the short harvest/workers formula also known from Matthew 9:37-38 and Luke 10:2. The saying is compact, memorable, and mission-oriented, with weak Thomasine secondary cautions. Its broad early mission setting makes it a strong candidate for circulating Jesus-tradition, even though its precise Sitz im Leben remains open.

The caution remains necessary because no loaded extant Greek Thomas witness preserves Logion 73, and the wording of "Lord" / "Lord of the harvest" requires careful Greek retroversion control.

Greek note: no loaded extant Greek Thomas witness preserves Logion 73. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Reconstruction implication: include Logion 73 in the Ukrainian reader text with a caution; use the Matthew/Luke control table to refine any later Greek retroversion.

## Thomas Unity / Monachos Cluster Summary

Decision rule: unity / monachos language should be treated as a Thomasine theological caution unless it is supported by independent controls.

Cluster note: .

Relevant logia: 4, 11, 16, 22, 23, 37, 49, 75, 106, with Logion 30 as a Greek P.Oxy. 1 control.

Implication for Logion 22: the children/kingdom core remains promising, but the "make the two one" expansion should remain in the apparatus.

Implication for Logion 23: the logion is now uncertain; it should not enter the reader text. Its "one from a thousand / two from ten thousand / stand as one" pattern may reflect Thomasine elect/solitary identity language rather than a secure earliest saying.

Next test case: Logion 16, because it has a strong synoptic division core plus a probable Thomasine monachos ending.

## Logion 86 Summary

Decision: included with caution

Marked reader text:

Foxes have holes, birds have nests, but the Son of Man has nowhere to lay his head.

Reason: the aphoristic core is strongly controlled by Matthew 8:20 and Luke 9:58. Thomas preserves the saying outside the narrative following context, which may reflect a sayings-collection form or secondary decontextualization.

Greek note: no loaded extant Greek Thomas witness preserves Logion 86. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

## Logion 89 Summary

Decision: included with caution

Marked reader text:

Why do you clean the outside of the cup? Do you not understand that the one who made the inside also made the outside?

Reason: Luke 11:39-40 strongly controls the maker-of-inside/outside argument, while Matthew 23:25-26 controls the cup and inside/outside motif. The reader prints the compact critique, but the Luke-dependence warning remains.

Greek note: no loaded extant Greek Thomas witness preserves Logion 89. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

## Logion 95 Summary

Decision: included with caution

Marked reader text:

If you have money, do not lend at interest; give to the one from whom you do not expect to receive it back.

Reason: the saying combines Jewish anti-usury tradition with the radical non-repayment motif controlled by Luke 6:34-35. It is ethically coherent with the reconstruction, especially Logion 6, but remains treated cautiously because the Coptic opening is damaged and the combination may be secondary.

Greek note: no loaded extant Greek Thomas witness preserves Logion 95. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic/control table: .

## Logion 96 Summary

Decision: leaven core included with caution; full Logion 96 uncertain.

Marked reader text:

The kingdom is like a woman who took a little leaven and hid it in dough.

Reason: the leaven parable core is strongly controlled by Matthew 13:33 and Luke 13:20-21. The Thomas-specific Father frame, large-loaves result, and hearing formula remain outside the main text.

Greek note: no loaded extant Greek Thomas witness preserves Logion 96. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

## Logion 99 Summary

Decision: true-family core included with caution; full Logion 99 uncertain.

Marked reader text:

Those who do the Father's will are my brothers and my mother.

Reason: Mark 3:31-35, Matthew 12:46-50, and Luke 8:19-21 strongly control the true-family core. The family-outside narrative frame and Thomas's kingdom-of-the-Father ending remain outside the main text.

Greek note: no loaded extant Greek Thomas witness preserves Logion 99. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Cluster-control note: .

## Logion 100 Summary

Decision: Caesar/God core included with caution; full Logion 100 uncertain.

Marked reader text:

Give Caesar what belongs to Caesar, and God what belongs to God.

Reason: the Caesar/God core is strongly controlled by Mark 12:13-17, Matthew 22:15-22, and Luke 20:20-26. The Thomas-specific third clause, "give me what is mine," remains outside the main text.

Greek note: no loaded extant Greek Thomas witness preserves Logion 100. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

## Logion 103 Summary

Decision: thief/watchfulness core included with caution; full Logion 103 appendix only.

Marked reader text:

Blessed is the one who knows when the thief is coming and keeps watch before he comes.

Reason: Matthew 24:43 and Luke 12:39 strongly control the householder/thief warning, while Mark 13:33-37 gives broader watchfulness support. Logion 21 provides internal Thomas control for the same motif, but it is too composite to print as the reader representative. The main text therefore prints only 103A.

Greek note: no loaded extant Greek Thomas witness preserves Logion 103. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

Cluster-control note: .

## Logion 107 Summary

Decision: lost-sheep core included with caution; full Logion 107 uncertain.

Marked reader text:

A shepherd had one hundred sheep. One of them went astray; he left the ninety-nine and searched for it until he found it.

Reason: the lost-sheep parable core is strongly controlled by Matthew 18:12-14 and Luke 15:3-7. Thomas's "largest sheep" and "I love you more" elements likely reshape the parable around the singular one and remain outside the main text.

Greek note: no loaded extant Greek Thomas witness preserves Logion 107. Any Greek form must be labeled Greek retroversion, hypothetical.

Synoptic evidence table: .

## Logion 114 Exclusion Summary

Decision: EXCLUDE\_AS\_SECONDARY.

Logion 114 is not printed in the clean reconstructed reader. It remains fully present in the appendix as a transparent exclusion case.

Reason: the unit is a developed dialogue scene in which Simon Peter says Mary should leave because women are not worthy of life, and Jesus responds with gender-transformation language: Mary must be made male to become a living spirit and enter the kingdom. This combination of named authority figures, gendered worthiness, transformation into male, and kingdom access looks like a later community-boundary and symbolic-anthropology layer rather than a compact early sayings-gospel core.

Textual note: the preserved witness in this project is the Coptic NHC II,2 text. No loaded extant Greek Thomas witness preserves Logion 114. Logion 22 offers internal male/female transformation context, and Logion 13 offers broad disciple-authority context, but neither directly controls the Peter/Mary exclusion scene or the gender-transformation conclusion.

Publication rationale: exclusion is not censorship. The logion is historically important for Thomas, Mary traditions, Peter traditions, gendered spiritual language, and community-boundary debates. This edition excludes it from the clean reconstruction because the evidence points to secondary or redactional material, while preserving it in the appendix and dossier for reader inspection.

Publication rationale: .
